How long does a portable power station last?

A portable power station's lifespan depends on the type of battery inside. Most new portable power stations, including all the models we recommend here, feature LiFePO₄ battery technology, which lasts far longer than older lithium-ion technology. How much more? LiFePO₄ power stations will last for more than 3,000 charge cycles, or about 10 years.

Why should you buy a portable power station?

Bring big backup power with you with these expert-recommended portable power stations, which can store enough power to charge electronics, appliances, and more.

What is a portable power station?

Portable power stations are large batteries in protective boxes, with AC outlets and other charging ports built in.

Which portable power station should I buy?

If you want a portable power station that's lighter than our upgrade pick, often costs less, and adds a small light, and you don't mind that it has less power, a single handle, and fewer outlets and charging ports: Get the Jackery Explorer 880. It weighs 21.8 pounds, and has an ergonomic handle on top and a small light built into the side.

What should I look for in a portable power station?

We also look for protective features such as port covers to keep out harmful dust and moisture. Informative display: Most portable power stations offer a battery meter to show you how much charge they have left, but we prefer displays that provide a precise percentage and other useful data.

Which battery is best for a portable power station?

These days most portable power stations, including all those we recommend here, use LiFePO₄ batteries, which are capable of holding far more cycles, which is the number of times a battery goes through a complete discharge and recharge, than older lithium-ion batteries while also being less likely to combust.
