

# Canada generator for house

What is a home standby generator?

A home standby generator is a backup electrical system that comes on automatically to provide power in the event of an outage- whether you are home, or away. No more sitting in the cold and the dark wondering when the power is going to come back on. A residential generator is installed outside your house like an A/C unit.

What is a whole-house generator?

Outages. A whole-house generator, or a standby generator, is a backup electrical system that automatically supplies power to a home during a power outage. Unlike typical generators for houses powered by gas or propane, EcoFlow offers huge 90kWh capacity solar-powered solutions that keep your home running smoothly, rain or shine.

What can a Generac® home standby generator do?

A Generac® Home Standby Generator can start all of your home's large appliances, ensuring your home remains a sanctuary for you and your family. From heating and cooling to cooking and laundry, our lives run on electricity.

How does a residential generator work?

No more sitting in the cold and the dark wondering when the power is going to come back on. A residential generator is installed outside your house like an A/C unit. Within seconds of detecting a power outage, it automatically distributes backup power to your entire home, or to cover select loads.

Is a backup generator a good investment for Canadian homeowners?

A power outage can get expensive. Lost food, a flooded basement and the disruption to your family life - not to mention the problems it could cause if you are running a business or working from your home. That's why a backup generator is a smart investment for Canadian homeowners.

How does a Generac® generator work?

Generac® generators provide the automatic backup power you need to protect your home and family during a power outage. Connected to your existing liquid propane or natural gas fuel supply, generators kick in within seconds of sensing power loss and will run until utility power returns.
