Gambia: Energy intensity: how much energy does it use per unit of GDP? Click to open interactive version. Energy is a large contributor to CO 2 - the burning of fossil fuels accounts for around three-quarters of global greenhouse gas emissions. So, reducing energy consumption can inevitably help to reduce emissions.

The Gambia is currently embarking on a journey to embrace renewable energy, particularly solar and wind power, as well as exploring prospects for green hydrogen production. Aligned with the vision laid out by its National Development Plan (NDP), the country aims to increase the share of renewable energy in its mix from 2% to 40% by 2025.
