

Serbia, in its quest for sustainable development, has begun embracing waste-to-energy solutions to address its waste management challenges. The country's efforts are primarily focused on converting municipal and industrial waste into energy, aligning with its environmental goals and EU accession requirements.

The Belgrade Waste Management PPP Project preserves environment from pollution and provide energy from waste in accordance with ...

Slovenia: Energy prices rise for households and industries in Q3 2024; Serbia negotiates increase in gas supply with Gazprom for 2025; Romania: Oil and gas companies to keep 0.5% minimum turnover tax despite recent Fiscal Code amendment; Romania: Electricity prices surge in November 2024, trading volumes and transaction values increase

Today, the company marks a milestone with the ceremonial opening of the Energy-from-Waste Plant for thermal treatment of solid, non-hazardous, municipal waste at the Vinca Waste Management Center in the presence of officials from the Serbian Government, City of Belgrade, project sponsors and lenders, and other dignitaries.

Waste-to-energy (WtE) projects as carbon offset investment innovations present a significant opportunity for energy-intensive industries in Serbia. These projects offer a dual benefit: they help in managing industrial and municipal waste and simultaneously generate energy, thereby contributing to carbon offsetting.

Waste-to-energy (WtE) projects have gained significant importance in Serbia's efforts to manage waste, promote sustainable development, and diversify its energy sources. These projects offer a range of benefits, including waste management solutions, renewable energy generation, reduced greenhouse gas emissions, and improved environmental ...

In the EU, out of the average 487 kg of generated waste, 480 kg is treated in some way - in 2017, an average of 30% of waste was recycled, 17% composted, 28% incinerated, most of which was used for energy recovery, and 24% of municipal waste was landfilled. In Serbia, only 257 kg out of 306 kg of waste per capita generated in 2017 was ...

Serbia: Government plans state guarantees for Srbijagas loans totaling 201 million euros; Romania: Retele Electric Muntenia announces 89 million euro tender for network maintenance and modernization; North Macedonia: Electricity and energy consumption in September 2024

With the construction of a waste-to-energy plant at Belgrade's Vinca landfill, Serbia has taken the first step in the utilization of waste for energy production. Experts from Serbia and abroad agree that this modern

# Energy waste solutions Serbia

technology helps address non-recyclable waste and protect the environment by reducing the need for landfilling.
