What is a capacitor size chart?

A capacitor size chart provides dimensions for various capacitor types and packages, helping you select the right component for your electronic project. What is a Capacitor and Why Size Matters? A capacitor is a passive electronic component that stores electrical energy temporarily.

What are some examples of capacitor sizes?

Below are some examples of capacitor sizes for various common devices: capacitor size for ac compressor  
Capacitor Size for Air Conditioner (air compressor start capacitor size): Typically, an air conditioner will require a capacitor between 5uF and 80uF, depending on the unit's tonnage and voltage.

What size capacitor should a washing machine use?

Washing Machine Capacitor Size: Capacitors for washing machines range from 5uF to 15uF. Fan Capacitor Size: Fan motors often use capacitors between 1uF and 5uF. Capacitor Size for Car Audio: A common rule is 1 Farad for every 1000 watts RMS. However, many systems benefit from using more capacitance.

What size capacitor does an air conditioner need?

For AC Units: An air conditioner typically requires a capacitor with a capacitance between 5uF and 80uF. Use the motor capacitor size calculator for a more precise value based on the tonnage of the unit. For Motors: Calculate based on the motor's power rating, voltage, and required startup capacitance.

How many watts a capacitor should be?

For small appliances: Capacitors of 1uF to 10uF are usually sufficient. For high-wattage equipment: Larger capacitance values (20uF to 100uF) may be needed to ensure stable operation. Capacitor Size Chart this can also be used as a reference when following Capacitor Size by Wattage.

What size capacitor do you need for a refrigerator motor?

Refrigerator Capacitor Size: Refrigerator motors generally require capacitors in the range of 1uF to 20uF. Washing Machine Capacitor Size: Capacitors for washing machines range from 5uF to 15uF. Fan Capacitor Size: Fan motors often use capacitors between 1uF and 5uF. Capacitor Size for Car Audio: A common rule is 1 Farad for every 1000 watts RMS.
