

How to install solar panels at home Maldives

The programme, which was launched on Tuesday, is designed to alleviate such difficulties and provide payment in instalments so that the people can benefit from the installation of solar systems for a long time, the Environment Ministry said.

Applications for the installation of rooftop solar panels can be submitted via a portal introduced for the purpose. There are two payment methods for the solar panels purchased under the program; a one-off payment and installments spanning three or five years.

- Installation: Once the surveys are complete and the capacity of your installation has been evaluated. At no additional expense, our technical staff will convert your rooftop into a solar-powered power plant. - Maintenance and aftercare: Unlike a boiler, your solar panels should operate efficiently even if they are not serviced on a yearly basis.

The new administration's "Magey Solar" programme, designed to generate power by installing rooftop solar panels on private homes, was launched on Tuesday.

Fenaka, in partnership with the Ministry of Climate Change, Environment and Energy, has officially launched the Magey Solar program, an ambitious initiative aimed at harnessing solar energy by installing photovoltaic (PV) systems on the rooftops of private homes across the Maldives.

STELCO, the State Electric Company of Maldives, is introducing a new program called the Avikatha program that provides an opportunity for homeowners to rent out their rooftops to install solar panel systems.

This programme aims to reduce electricity costs and promote the efficient use of energy resources in the Maldives. Applications can be submitted through the Fenaka Corporation website, with eligibility determined by the order of submissions. Previously, 748 households successfully installed solar systems.

To make solar PV systems more accessible, the initiative allows those interested in installing such systems to acquire them through utility companies via an installment payment plan. The installation will operate on a net metering basis, ensuring efficient utilisation.
