

# Indonesia echogen power systems

What is echogen SCO 2?

Echogen has developed next generation technology for a wide range of power generation applications. The sCO<sub>2</sub> cycle offers improved performance and significant operational advantages over steam and ORC cycles for both combined-cycle systems and primary power plants.

What power cycles does Echogen offer?

Echogen offers power cycles for waste heat recovery and gas turbine combined cycle power plant applications in the 1-10 MWe range.

What's new at echogen?

Echogen recently announced the first commercial sale of their flagship product, the EPS100. This sale will provide operational, performance, and reliability data on equipment similar to what would be deployed in their power plant. The Department of Energy has also funded a detailed FEED study of an sCO<sub>2</sub> power cycle (DE-FE0031585).

Where is Echogen Power Systems (DE) located?

Recipient Organization: Echogen Power Systems (DE), Inc. 365 Water Street Akron, Ohio 44308-1044

Who is echogen & how does it work?

Echogen licensed its technology to Germany's Siemens Energy. In February 2021 Siemens announced it will deploy the heat-to-energy system developed by Echogen to convert the waste heat from a TC (TransCanada) Energy natural gas pipeline into 9.3 megawatts of electricity.

Where is echogen based?

Founded in 2007, Echogen, located about 40 miles south of Cleveland, in downtown Akron, Ohio, is working in commercial sCO<sub>2</sub> systems. Supercritical CO<sub>2</sub> has several properties (which we'll discuss in a moment) that make it particularly suited for this application.

Echogen is a producer of scalable heat-to-power systems. Our process captures heat energy--which would normally be lost--and converts into higher value, usable power. Echogen offers a cost-effective solution to monetize our ...

Echogen is a leader in developing thermal systems utilizing carbon dioxide (CO<sub>2</sub>) as the working fluid, including industrial-scale high-temperature heat pumps, heat-to-power systems, and utility-scale long duration energy storage systems. Over the past 17 years, Echogen has designed and tested systems up to 7 MWe capacity, and is presently ...

components with safe, low-cost, highly-scalable storage media to deliver a superior ETES solution. This system is a modular ...

Echogen is a leader in developing thermal systems utilizing carbon dioxide (CO<sub>2</sub>) as the working fluid, including industrial-scale high-temperature heat pumps, heat-to-power systems, and ...

Echogen has combined its expertise in supercritical carbon dioxide (sCO<sub>2</sub>)-based power cycle technology and components with safe, low-cost, highly-scalable storage media to deliver a superior ETES solution. This system is a modular solution, ideally designed as 25MW and 50MW power blocks, with 6+ hours minimum duration.

Echogen Power Systems background  
o Founded in 2007  
o Original mission: To develop and commercialize a better exhaust and waste heat recovery power system using CO<sub>2</sub> as the working fluid  
o First company to deliver a commercial sCO<sub>2</sub> power cycle  
o New mission: Developing a CO<sub>2</sub>-based long-duration electrical energy storage system

Echogen is a producer of scalable heat-to-power systems. Our process captures heat energy which would normally be lost--and converts into higher value, usable po...

Echogen converts wasted heat into higher value power. Learn about our waste heat recovery solution that creates economic, clean, reliable energy.

Siemens Energy has licensed Echogen Power Systems" patented technology to use supercritical carbon dioxide (sCO<sub>2</sub>) as the working fluid in a closed-loop power cycle to ...

Echogen has developed next generation technology for a wide range of power generation applications. The sCO<sub>2</sub> cycle offers improved performance and significant operational advantages over steam and ORC cycles for both ...

for both combined ...

Echogen is a producer of scalable heat-to-power systems. Our process captures heat energy--which would normally be lost--and converts into higher value, usable power. Echogen offers a cost-effective solution to monetize our customers' otherwise wasted heat.

power system by Siemens using Echogen technology was recently announced<sup>2</sup>, and is scheduled to begin operation in 2021. o Indirect-fired sCO<sub>2</sub> power cycles are heat-source agnostic. Lessons learned and technology derived from this project on the power island will be directly relevant to other applications, included coal power without CO<sub>2</sub> capture.
