What is a smart storage bin?

Smart Storage Bin is a building that can store 20 tons (20,000 kilograms) of material. Unlike regular Storage Bins, they can output Automation signals when powered. The default storage capacity is 20 tons (same as the regular Storage Bin) and can be manually set to a smaller number by player. Can be used to automatically stop production when full.

Is the smart storage bin a bad idea?

Yes, the smart storage bin is rather awful. Which is rather sad, it would be neat to have them just work, but I always use weight plates instead, which is more error prone and likelier to break. No idea why the smart storage bin uses power while gas and liquid storage get automation for free.

Is a smart storage container a joke?

The smart storage container is a joke. For 60W, I do not even get the option to send a signal when low. Only when full. So automating a system where you "check" the status of the bin becomes a 10 tile filter/buffer/memorytoggle fiesta. Please for the love of god change it.

Can You Send 100kg of coal through Smart Storage?

Say, you want to send ONLY 100kg of coal. Through that particular line. Afaik you can't do that with smart storage. If you could, that would be amazing. What do you know, I thought about it and I have it. I used a not gate with the smart storage and a loader, in a fashion that turns loader off if the smart storage is full.

I've looked at the smart storage bin and had the settings to take in specific resources, and attached it with automation wire to a refiner. But it's red and can't figure out ...

Smart Storage Bin is a building that can store 20 tons (20,000 kilograms) of material. Unlike regular Storage Bins, they can output Automation signals when powered. The default storage capacity is 20 tons (same as the regular Storage Bin) and can be manually set to a smaller number by player...

I don't understand why the automated storage container, or even the automatic dispenser(?) even need power. The dispenser can be used without power. These buildings ...

The Smart Storage Compactor is an item in Oxygen Not Included that was added in the Occupational Update. It stores resources of the player's choosing. This item is in the fourth tier of Research...

I've been playing quite a bit of ONI recently and think I have most of the systems down, but solid transport (and, on a simpler level, efficient storage) is causing me some frustration.

Stores the Solid Materials of your choosing. Sends a when bin is full. Smart storage bins can automate

I don't understand why the automated storage container, or even the automatic dispenser(?) even need power. The dispenser can be used without power. These buildings having to use power, while most others don't just doesn't make sense. Pretty sure even the fridge automation signal can still function even when it's powered off.

I've looked at the smart storage bin and had the settings to take in specific resources, and attached it with automation wire to a refiner. But it's red and can't figure out how to make it green. #6

The Smart Storage Compactor is an item in Oxygen Not Included that was added in the Occupational Update. It stores resources of the player's choosing. This item is in the fourth tier ...

Smart Storage is in the fourth tier of Research and is a combination of Power Regulation and Advanced Research. Duplicants will need to additionally research Automatic Control, Generic Sensors, Brute-Force Refinement and Refined Objects to reach Smart Storage. Items in ...

Modified Smart Storage Bin and Refrigerator with logic that works same as Smartbattery logic. Also consumption energy down to 20W for Modified Smart Storage Bin and down to 60W for Modified Refrigerator.
