Is IBM ESS 3500 scalable?

The IBM ESS 3500 is deployable as either a stand-alone system or as an edge storage system. It is scalable to suit various high-performance workloads with other IBM ESS 3500 systems or handle larger storage capacity needs with the addition of up to 8 storage enclosures per storage rack.

What is IBM elastic storage server 3500?

This IBM Redbooks publication introduces and describes the IBM Elastic Storage Server 3500 (ESS 3500) as a scalable, high-performance data and file management solution. The solution is built on proven IBM Storage Scale technology, formerly IBM Spectrum Scale.

What is IBM ESS 3500 data movement?

The data movement can be used to automate and optimize data placement between IBM ESS 3500 and other storage within the IBM Spectrum Scale storage infrastructure. This appendix also provides you with the information to consider when not using the switches that IBM provides and supports for the management network.

Does IBM elastic storage system 3500 support POWER9 EMS?

When IBM Elastic Storage System 3500 is added to an existing ESS cluster that has a POWER9 EMS node, the same POWER9 EMS node can also be used to manage IBM Elastic Storage System 3500. The POWER9 EMS node can be ordered as a part of IBM Elastic Storage System 3500. IBM Elastic Storage System 3500 is supported only on the POWER9 EMS.

How do I create a CES file system in IBM ESS 3500?

For CES deployment, the IBM ESS 3500 system should have a CES file system. To create the CES file system, run the following `essrun` command: Note: A CES and other file systems can coexist on the same IBM ESS cluster. This chapter discusses deployment of the IBM Elastic Storage System (ESS) 3500 with outside ESS Management Server (EMS).

Does IBM ESS 3500 support AI and ML workloads?

For example, in the document, a single IBM ESS system provides a read throughput of 48 GBps. Adding a second IBM ESS system increases the read throughput to 94 GBps, which is almost twice the throughput of a single IBM ESS system. AI and ML workload can benefit from the outstanding performance capabilities of the IBM ESS 3500 system.

From its 2U-24 NVMe drive form factor, ESS 3500 can provide up to 91 gigabytes per second (GB/s) of throughput performance with low latency to optimize all types of I/O patterns and data layouts. With the high cost of data science and GPU resources, ESS 3500 delivers data to applications faster and for GPU-accelerated use cases, it helps ensure ...

ESS 3500 is the newest model and continues breaking barriers with industry leading performance and scalability. The ESS 3500 leverages the power of Spectrum Scale and NVMe/flash technology to deliver the ultimate high-performance storage for AI, data analytics and high-performance computing use cases.

The latest IBM ESS 3500 is the most innovative system that provides investment protection to expand or build a new Global Data Platform and use current storage. The system allows enhanced, non-disruptive upgrades to grow from flash to hybrid or from hard disk drives (HDDs) to hybrid.
