The new calculator aims to replace some of the more cost- and labour-intensive BESS design steps that this work represents. EnSights claimed it can generate financial projections instantaneously and recommend the ideal battery size and project operation modes.

The enSights BESS calculator generates financial projections and recommends ideal battery size and operation modes in seconds, to introduce economies of scale to battery ...

system (BESS) add-on for a consumer. To maximize the contributions while minimizing the price of the installations, the calculator finds the optimal sizes of a PV and a BESS for a site. ...

The new BESS calculator uses a proprietary model to balance maximizing returns over the asset lifetime with optimizing battery lifespan by accounting for critical battery specs and degradation ...

The new tool, the Optimal Sizing Calculator, finds the optimal size of a photovoltaic system (PV) and a battery energy storage system (BESS) in order to maximise the ...

The PVBT tool utilizes a real-time BESS control method that aim to maximize the PV self-consumption and energy arbitrage that has been validated using real measurements in addition to integrating a rigorous ageing model to determine the loss ...

To maximize the contributions while minimizing the price of the installations, the calculator finds the optimal sizes of a PV and a BESS for a site. Those sizes are peak power of the PV system, energy capacity of the BESS, and power converter rated power of the BESS.

The new BESS calculator uses a proprietary model to balance maximizing returns over the asset lifetime with optimizing battery lifespan by accounting for critical battery specs and degradation parameters, such as depth of discharge (DoD), round-trip efficiency (RTE), and charge and discharge cycles.
