Agenos Energy and CGES AD Podgorica have signed a contract to construct an 87.5 MW solar park in western Montenegro, bringing the project closer to completion.

Over the period of one year Montenegro often has over 240 sunny days, thus the use of solar systems is the most ideal, most efficient and cleanest way to obtain energy. The intensity of solar radiation is among the highest in Europe, which creates ideal conditions for a serious energy transition by introducing solar thermal collectors and ...

Montenegro's transmission system operator, CGES, and Cetinje-based M Energy have signed the first agreement on connecting a planned solar power plant of 385 MW to the grid. The value of the project is around EUR 300 million.

With the Solari project, the Montenegrin government aims to promote and stimulate renewable energy production and cut carbon dioxide emissions, while reducing monthly electricity bills of households and businesses and providing them with energy independence.

Montenegrin solar array builder EPCG Solar Gradnja has so far installed some 40 MW of photovoltaic systems on 4,300 rooftops of households and businesses in the country, its owner, state-controlled power utility Elektroprivreda Crne Gore (EPCG), said.

The new Energy Community target for the share of RES in gross final energy consumption for Montenegro is 50% in 2030. Also see: More PV and wind to save Balkan rivers. Montenegro has a great potential for using solar energy, i.e. the number of hours of insolation is over 2.000 h/year or 200 days/year for the greater part of the territory.

Three companies have announced hundreds of millions of euros in investments in Montenegro. They intend to build three solar power plants and a wind farm in Rozaje, Savnik and Cetinje. The country recently reduced the VAT for solar panels and foresaw a spike in solar power output for this year.

The project Solari 3000+ and Solari 500+ represents the beginning of energy transition in Montenegro and it is one of the most important investments into energy sector over the last 40 years. Based on energy transition, the project's goal is to reduce CO2 emission as much as possible and preserve the environment.

Montenegro solarize solar panels

Montenegro's power transmission system operator CGES has so far signed six connection agreements for solar power projects. Their total peak capacity would amount to 1.64 GW in peak capacity. The investors are M Energy, Sun Horizon, Obnovljivi izvori energije, Solar Power, EE Korita and Agenos Energy

Mico Djukanovic, the president of Montenegrin utility Elektroprivreda Crne Gore (EPCG), said on his Twitter account this week that the VAT on solar panels has been reduced from 21% to 7%.
