

# Nauru renewable energy power grid

Integrating new solar assets into Nauru's grid can reduce the country's dependence on fossil fuels, decrease carbon dioxide (CO<sub>2</sub>) emissions, and strengthen NUC's commercial

The Government of Nauru has set three ambitious energy targets in the Nauru Energy Road Map 2014 - 2020 and following updates, respectively: 24/7 grid electricity supply with minimal interruptions; 50% of grid electricity supplied from renewable energy sources and

the solar power generation will have increased from 1,180 MWh/year to 15,500 MWh/year and will represent 47% of the electricity generation mix on the island. NUC has now approached MFAT to fund an assessment of pumped hydroelectric energy storage (PHES) to allow load shifting and enable up to 90% renewable energy penetration. 3.

Nauru is currently in a position of unsustainable energy production and consumption due to a long history of subsidized energy and a near complete reliance upon fossil fuels. This report explores options to begin to remedy this situation and promote a sustainable energy mix including renewable energy technologies and energy conservation measures.

Energy sector landscape covering supply and demand and institutional arrangements; Experience, potential and challenges in the use of renewable energy and energy efficiency; and, Data needs for the energy road map and beyond.

emissions from renewable power is calculated as renewable generation divided by fossil fuel generation multiplied by reported emissions from the power sector. This assumes that, if renewable power did not exist, fossil fuels would be used in its place to generate the same amount of power and using the same mix of fossil fuels. In countries and ...

Renewable energy The 2005 National Sustainable Development Strategy (NSDS) and the 2009 Energy Policy Framework both state Nauru's aim to make 50% of energy provided through renewable energy by 2015. Solar resource measurements show an average of over 6 kWh/m<sup>2</sup>/day with a seasonal variation of around 10-15%.

provide a guideline for the development of the energy sector of Nauru. The policy framework was adopted in 2009 with the vision of providing reliable, affordable and sustainable energy for enabling the socio-economic development of Nauru. It includes a target to supply 50% of the total energy use in Nauru from renewable sources by 2015. Nauru ...

An agreement for a 300KW PV grid connect was signed in Suva, Fiji, by the EU and Nauruan Government in December 2016. EU will be visiting the island nation in February to finalized arrangements and we envisioned

# Nauru renewable energy power grid

the project to be completed before the end of this year.

Pacific Islands Greenhouse Gas Abatement through Renewable Energy (PIGGAREP) has extended training to Nauru Renewable Energy Staff and has facilitated successful installation of 150 solar powered street lights in Nauru college.ll
