

North Korea stem storage

Is North Korea expanding its oil & lubricant storage area?

Recent commercial satellite imagery of the Nampho Port, one of North Korea's largest commercial ports, shows that the petroleum, oil, and lubricant (POL) storage area is being expanded again. Three new, larger storage tanks are currently under construction, which, when complete, will mean five new tanks will be added this year.

Why is the public concerned about North Korea's Advanced Military Technology?

More specifically, the public's concern centers on North Korea's advanced military technology because they have repeatedly conducted nuclear and ICBM tests, ignoring the norms of the international community.

Are North Korea's ICBM and SLBM advanced technology?

Korea Institute of Science and Technology Information. This is the ratio of countries of the first authors between 2007 and 2016 that include North Koreans as co-authors. Note that the development of ICBM and SLBM, which North Korea uses for military security, is also an advanced technology, but little is known about its specific status.

What technology does North Korea use?

As far as advanced weapons are concerned, North Korea is developing inter-continental ballistic missiles (ICBMs), submarine launched ballistic missiles, Iskandar missiles, and hypersonic missiles. For economic growth, North Korea is researching mainly energy resource-substituting and energy-saving technologies.

How long will North Korea's nuclear plant be operational?

Given the observed level of activity and North Korean statements concerning the importance of continued development of nuclear weapons and ballistic missiles, and barring any unforeseen developments, the plant will undoubtedly remain operational for the foreseeable future.

How does North Korea develop technology?

Unlike most of the advanced economies wherein technologies are driven by fierce competition in the private sector, North Korea's technological development is directed by the country's leader, Kim Jong-un, under the country's socialist economic system.

Recent commercial satellite imagery of the Nampho Port, one of North Korea's largest commercial ports, shows that the petroleum, oil, and lubricant (POL) storage area is being expanded again. Three new, larger ...

The dismantlement of the Pyongsan Uranium Concentrate Plant should be an essential component to any meaningful future "complete, verifiable, irreversible dismantlement" nuclear agreement between the United States and North Korea. Given known North Korean industrial practices, observed waste storage practices, and health and safety concerns ...

North Korea stem storage

The abandoned mines in North Korea pose substantial environmental threats. When converted into gravity energy storage (GES) facilities, mining pollution can be reduced, local welfare can be improved, and the possibility of military exploitation can be lowered.

North Korea's leaders consider investments in science and technology to be crucial both to national defense and to the national economy. The Kim regime emphasizes the importance of ...

North Korea Chemical Facilities updates and map will be available in late 2021. Several facilities in the DPRK have been linked with the production and/or storage of chemical weapon (CW) agents, their raw chemicals and precursors. CW agents are then moved to either the Sakju (??) or Ganggye (??)-based CW facilities for weaponization ...

This compilation of articles explores North Korea's energy security challenges and chronic electricity shortages by utilizing commercial satellite imagery, state media and other sources to survey the nation's energy production facilities and infrastructure.

The problem is that North Korea's inappropriate use of advanced technology threatens international security, and now the public is alarmed about North Korea's advanced technology. More specifically, the public's concern centers on North Korea's advanced military technology because they have repeatedly

Recent commercial satellite imagery of the Nampho Port, one of North Korea's largest commercial ports, shows that the petroleum, oil, and lubricant (POL) storage area is being expanded again.
