How can auxiliary services improve China's power system operation?

Accurate and seamless auxiliary services in the power market can guarantee smooth and continuous power system operation. China's new round of power system reform has entered a critical period, and reform implementation requires comprehensive improvements in the maturity of the supporting auxiliary service market.

What is a peak auxiliary load?

Even for a specific product, the peak auxiliary load may vary depending on the use case (e.g., C-rate, charging/discharging profile) and ambient temperature. Additionally, the peak auxiliary load for a project may increase over time due to augmentation--adding new BESS equipment to offset battery capacity losses caused by degradation.

What is the electricity cost for auxiliary loads?

The electricity cost for auxiliary loads depends on the energy consumption (kWh) and the pricing structure set by independent system operators or utilities. For example: o In ERCOT, the BESS auxiliary load must be metered separately from energy used for battery charging and is charged at the retail rate.

Who is responsible for the electricity costs associated with Bess auxiliary loads?

Project owners are also responsible for the electricity costs associated with the BESS auxiliary load during operation. The electricity cost for auxiliary loads depends on the energy consumption (kWh) and the pricing structure set by independent system operators or utilities. For example:

Can a CSP plant become a power auxiliary service provider?

Aside from serving as power suppliers, CSP plants can become power auxiliary service (AS) providers using their excellent peak shaving abilities, which can increase the consumption of PV power and improve the comprehensive benefits of the hybrid system.

What are the administrative measures for electric power auxiliary services?

To standardize the management of electric power AS, the Administrative Measures for Electric Power Auxiliary Services is issued, adding technical guidance and management requirements for new energy, new energy storage, and demand-side management .
