What is a solarfold photovoltaic container?

The Solarfold photovoltaic container can be used anywhere and is characterized by its flexible and lightweight substructure. The semi-automatic electric drive brings the mobile photovoltaic system over a length of almost 130 meters quickly and without effort into operation in a very short time.

How does a solarcontainer work?

The Solarcontainer can also be lifted or shifted without a foundation, but if the user faces harsh wind conditions, ballast stones can be placed on the rail system if needed. For the folding and unfolding of the photovoltaic panels, the module works electrically using an automatic conveyor system, activated with a click of a button.

How can a solar container not cast a shadow on a photovoltaic system?

This property makes it possible for the container not to cast a shadow on the mobile photovoltaic system. The solar container is lifted using the corner corners in the roof frame. With these in the base frame, the module can be fixed and secured during transport using the twist-lock system.

How does a mobile solar container work?

Its base is made up of a solid floor frame, and mounted on this frame is the photovoltaic panels' rail system and the folding mechanism. This setup enables easy transport of the mobile solar container via cargo ship vessels, trains, and trucks too, given that the rail system can be stashed until it fits the container's frame.

What is a photovoltaic (PV) cell?

Photovoltaic (PV) cells, also known as solar cells, are semiconductor devices that convert solar energy directly into DC electric energy.

How many solar panels can be installed in a solarcontainer?

The unfolded panels can reach up to 120 meters in length, and there are 240 solar panels that can be installed. The Solarcontainer is a mobile system that can be used for both on- and off-grid purposes, including rescue missions and gatherings. The foldable photovoltaic panels are tucked inside a mobile solar container
