Generally speaking, the difference between "power" and "powers" is subtle. "Power" is usually used more broadly and generally to describe what actions or control a group or individual can exert. "Powers," on the other hand, is usually used to refer to a set of specific, well-defined abilities of a group or individual.

OverviewDefinitionUnitsAverage power and instantaneous powerMechanical powerRadiant powerSee alsoPower is the amount of energy transferred or converted per unit time. In the International System of Units, the unit of power is the watt, equal to one joule per second. Power is a scalar quantity. Specifying power in particular systems may require attention to other quantities; for example, the power involved in moving a ground vehicle is the product of the aerodynamic drag plus traction force on the wheels, and the velocity of the vehicle. The output power of a motor is the product of ...

As a mathematician, I rarely use the word "power" here. We normally read the expression  $a^b$  as "a to the b". If  $b$  is a simple number, I would use the ordinal:
