

# Serbia eminent energy

What type of energy is used in Serbia?

Energy in Serbia is dominated by fossil fuels, despite the public preference for renewable energy. Serbia's Total Energy Supply is almost 700 PJ, with the energy mix in 2021 comprising coal (45%), oil (24%), gas (15%), and renewables (16%).

What is Serbia's energy situation?

Within the intricacy of Serbia's energy situation, the implications run deeper than initially can be perceived as holding profound significance not just for the nation but also for the broader geopolitical landscape in the context of the Russia-Ukraine conflict. The energy sector stands as a pivotal industrial sector within Serbia.

What is Serbia's energy supply in 2021?

Serbia's Total Energy Supply is almost 700 PJ, with the energy mix in 2021 comprising coal (45%), oil (24%), gas (15%), and renewables (16%). Bioenergy and hydroelectric power were the leading contributors within the renewable energy category, accounting for 67% and 29% of the renewable supply, respectively.

How many MW of electricity does Serbia have?

Installed capacity of hydro power is 2,835 MW and as of December 2019 wind power capacity is 500 MW. Serbia also makes use of geothermal and solar energy, currently 27% of Serbia's electricity comes from hydro while 4% comes from other renewables. Additional 600 MW of wind capacity is planned by 2030.

What role does the energy sector play in Serbia's EU accession?

The energy sector plays a pivotal role in Serbia's EU accession journey, serving as a key nexus between economic development, sustainability, and alignment with EU standards, essential for the nation's broader goals of integration and regional stability.

What is Serbia's energy investment plan?

The Ministry of Mining and Energy has announced a EUR15 billion investment plan for the electricity sector in next several years, expecting to reach more than 3 GW of renewable energy production plants. The main players and investors in the Serbian Energy Sector are:
