

Through the ongoing advancement of new energy projects such as "solar energy storage and charging" and "smart microgrids," we are committed to providing innovative energy solutions for Hungary and the entire European region, promoting sustainable and efficient energy development in Europe.

According to the timetable set by the new National Energy Strategy adopted in January, at least 6,000 MW of solar capacity must be operating in Hungary by 2030, which can only be accomplished if large-scale project development starts in the country as soon as possible.

Looking ahead, SolServices remains committed to scaling up solar energy utilisation in Hungary. With ambitious targets set by the National Energy Strategy for 12,000 MW of installed photovoltaic capacity in Hungary by 2030, the company will continue leading the charge in developing environmentally and nature-friendly solar parks.

Hungary is aiming for 90% of its electricity generation to come from low-carbon sources by 2030. Adding more than 500 MW of PV capacity in 2021, the Hungarian solar market has crossed the threshold of 2.5 GW of cumulative capacity and has set its sights on reaching 6.5 GW by 2030.

Currently, the MOL Group operates six solar parks in Hungary with a combined capacity of 31.5 MW, alongside 13.6 MW of capacity in Croatia. ... By leveraging state-of-the-art technology and sustainable solutions, the company is taking significant steps toward a low-carbon energy landscape in Hungary and the region.

By allowing home solar producers to sell their excess power at competitive market prices, Hungary is taking a significant step toward a more sustainable and decentralized energy system. Additionally, the new regulations could help address concerns about the viability of solar energy production in the country.

International solar developer ib vogt has signed an agreement to sell a 66 MWp solar PV project to Hungarian MOL Group. The solar farm, located in Ballászög, Hungary, will begin commercial operation in Q1 2025. This project, the first by ib vogt in Hungary, will contribute to the country's goal of producing 90 percent of its domestic electricity carbon dioxide-free by 2030. ...

SolServices Ltd.'s state-of-the-art solar projects, based on the latest innovations, as well as its environmentally friendly deployment and operational solutions, provide realistic, competitive alternatives - from both economic and environmental perspectives - to energy generation methods of conventional large power facilities emitting ...

The new 5 million HUF grant for solar installations in Hungary provides a valuable opportunity for rural

Sustainable solutions solar Hungary

families and businesses to adopt sustainable energy solutions. By choosing Solar& Solar Wholesale, you can trust in a wide selection of quality products that meet your energy needs.

The new generation solar park concept of SolServices Ltd., which includes the development of Lumen Park Szolnok, has been awarded a shared grand prize in the "Biodiversity Conservation and Restoration" category by the Business Council ...
