What is the TSX PRG LDR module?

The TSX PRG LDR module is designed to simplify duplicating or updating applications on Nano and TSX Micro PLCs without the need for a programming terminal. An application (15 Kwords maximum in internal RAM) can be transferred from a PLC in the TSX PRG LDR module (and saved within it), then transferred from the TSX PRG LDR module to the PLC.

How many Kwords does a TSX 37 plc have?

16 Kwords for TSX 37 10/21/22 PLCs designed to back up the application program (11 or 14 Kwords maximum) and to back up 1024 %MW internal words in the event of a battery failure or no battery. For TSX 37 21/22 PLCs, the internal RAM memory can be extended via a 32,64 or 128 Kwords PCMCIA memory card, either RAM or Flash EPROM.

Can TSX 37 21/22 plc be extended?

For TSX 37 21/22 PLCs, the internal RAM memory can be extended via a 32,64 or 128 Kwords PCMCIA memory card, either RAM or Flash EPROM. The same memory card incorporated the possibility of containing a storage zone for additional data, e.g. for production data and manufacturing recipes.

L'état faible des piles est indiqué par le voyant BAT sur le panneau avant de la carte. Ce voyant s'allume lorsque la pile principale est faible. Celle-ci doit être changée dans les 8 jours à venir. Toutefois, nous vous conseillons de ne pas attendre ce voyant avant d'effectuer le ...
