Yemen operates on a 230 Vac 50 Hz electrical system, and Power inverters are a great way to attain off-grid, mobile and/or emergency backup power. Inverters produce clean, non-polluting energy unlike fuel-powered generators.

For off-grid solar systems, off-grid inverters don't have to match phase with the utility sine wave as opposed to grid-tie inverters. Electrical current flows from the solar panels through the solar charge controller and the battery bank before it is finally converted into AC by the off-grid inverter.

In building a solar panel system in Yemen, one crucial element that you must not underestimate is the so-called solar inverter. This system is essential to change the power from your solar panels (direct current or DC) into household useable power, otherwise known as alternating current (AC).
